

DEBRIS FLOW TORRENTS IN THE AUTONOMOUS PROVINCE OF BOLZANO

- GENERAL FEATURES
- MORPHOMETRY
- GEOLOGY AND GEOMORPHOLOGY
- LAND USE
- WATER DISCHARGES
- RECORDED DEBRIS FLOW EVENTS

Data sources:

- “Ufficio Bacini Montani, Prov. Autonoma di Bolzano”,
for general information, hydrologic data and part of the geology;
- “CARFRA project, Ufficio Geologia e Prove Materiali, Prov. Autonoma di Bolzano”,
for part of the geology and most of the recorded events;
- CORINE database, for land use information;
- First Intervention Squad reports (FI), newspapers and other, where specified.

General features

<i>Administrative code</i>	Nr.	1951
<i>Municipality</i>		Curon Venosta
<i>Stream name</i>		Calarea or Calce/ Kalcherbach
<i>Survey map</i>	1:10000	004 14
<i>Topographic Coordinates</i>	(outlet section)	E 1613.615
		N 5186034
<i>CARFRA Code</i>	Nr.	1648
<i>Collection drain</i>	Nr., name	1949, Rio Piz or Roja
<i>Next collection drain</i>	Nr., name	1944, Adige (upstream of Resia Lake)

Morphometric characteristics

	<i>Basin area</i>	(km ²)	1.20
<i>Basin Altitude</i>	- maximum	(m)	2763
	- mean	(m)	2379
	- minimum (fan top)	(m)	1820
	- confluence	(m)	1775
<i>Basin Slope</i>	- maximum	(°)	52.44
	- mean	(°)	23.08
	- minimum	(°)	0.51
	<i>Average aspect</i>	(°)	121.39
	<i>Channel lenght</i>	(km)	2.34
	<i>Channel mean slope</i>	(°)	16.41
	<i>Fan mean slope</i>	(°)	15.99

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Paragneiss
<i>Medium reach</i>	Paragneiss with breccias, limestones, argillites and moraine
<i>Lower reach</i>	Alluvium mixed with talus
<i>notes</i>	

Land use (%)

<i>Crops</i>	-
<i>Woodlands</i>	2.96
<i>Grasslands</i>	64.15
<i>Heath and shrub lands</i>	-

<i>Scattered vegetation cover</i>	32.89
<i>Bare rocks</i>	-
<i>Other</i>	-

- Potential woodland upper limit (m):

Water discharges (m^3s^{-1})

<i>Maximum</i>	
<i>Mean</i>	
<i>Minimum</i>	

Debris flow events

Date	Magnitude (m^3)
15 Sept. 1965	1000
<i>Notes</i>	
Debris flow triggered by heavy rainfall; the gravel blocked the road to Resia and the aquiduct	

Stream: Rio Cengles

General features

<i>Administrative code</i>	Nr.	2078
<i>Municipality</i>		Lasa
<i>Stream name</i>		Cengles / Tschengelserbach
<i>Survey map</i>	1:10000	011 16
<i>Topographic Coordinates</i>	(outlet section)	E 1625350
		N 5163273
<i>CARFRA Code</i>	Nr.	1607
<i>Collection drain</i>	Nr., name	1, Adige
<i>Next collection drain</i>	Nr., name	-

Morphometric characteristics

	<i>Basin area</i>	(km ²)	10.53
<i>Basin Altitude</i>	- maximum	(m)	3366
	- mean	(m)	2286
	- minimum (<i>fan top</i>)	(m)	950
	- confluence	(m)	877
<i>Basin Slope</i>	- maximum	(°)	67.86
	- mean	(°)	33.94
	- minimum	(°)	0.00
	<i>Average aspect</i>	(°)	185.41
	<i>Channel lenght</i>	(km)	5.90
	<i>Channel mean slope</i>	(°)	21.34
	<i>Fan mean slope</i>	(°)	3.33

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Micaschists, paragneiss, talus debris, moraine and amphibolits
<i>Medium reach</i>	Micaschists, paragneiss and moraine
<i>Lower reach</i>	Alluvium and alluvial fans
<i>notes</i>	Steep catchment with diffused slope instabilities

Land use (%)

<i>Crops</i>	-
<i>Woodlands</i>	27.53
<i>Grasslands</i>	18.08
<i>Heath and shrub lands</i>	6.33
<i>Scattered vegetation cover</i>	27.48
<i>Bare rocks</i>	20.17
<i>Other</i>	0.41

- Actual woodland upper limit (m) : 2100
- Potential woodland upper limit (m): 2200

Water discharges (m³s⁻¹)

<i>Maximum</i>	69.3
<i>Mean</i>	0.188

<i>Minimum</i>	0.075
----------------	-------

Debris flow events

Date	Magnitude (m^3)
10 July 1989	8.200
27 Aug. 1971	?
Summer 1992	3.000

Notes
The 1971 event originated from a landslide which ended in the stream bed, then turning into a flow that flooded with logs and debris the town, destroying two bridges.

FI n.90177 and 92121
Alto Adige, 28/8/71 and 11/7/89

Stream: Rio Chiesa

General features

<i>Administrative code</i>	Nr.	1725
<i>Municipality</i>		Naturno
<i>Stream name</i>		Chiesa / Kirchbach
<i>Survey map</i>	1:10000	013 09
<i>Topographic Coordinates</i>	(outlet section)	E 1653117 N 5168770
<i>CARFRA Code</i>	Nr.	1663
<i>Collection drain</i>	Nr., name	1, Adige
<i>Next collection drain</i>	Nr., name	-

Morphometric characteristics

	<i>Basin area</i>	(km^2)	2.36
<i>Basin Altitude</i>	- <i>maximum</i>	(m)	2918
	- <i>mean</i>	(m)	1733
	- <i>minimum (fan top)</i>	(m)	600
	- <i>confluence</i>	(m)	531
<i>Basin Slope</i>	- <i>maximum</i>	($^\circ$)	62.43
	- <i>mean</i>	($^\circ$)	36.11
	- <i>minimum</i>	($^\circ$)	0.51

<i>Average aspect</i>	(°)	172.51
<i>Channel lenght</i>	(km)	4.37
<i>Channel mean slope</i>	(°)	27.57
<i>Fan mean slope</i>	(°)	4.39

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Paragneiss, micaschists, ortogneiss, granitic gneiss and moraine
<i>Medium reach</i>	Ortogneiss. Paragneiss, micaschists and moraine
<i>Lower reach</i>	Alluvial fans and alluvium
<i>notes</i>	Very steep and unstable catchment, poorly wooded, frequent events of solid transport with large boulder

Land use (%)

<i>Crops</i>	14.98
<i>Woodlands</i>	-
<i>Grasslands</i>	16.32
<i>Heath and shrub lands</i>	1.41
<i>Scattered vegetation cover</i>	60.84
<i>Bare rocks</i>	6.45
<i>Other</i>	-

- Actual woodland upper limit (m) : 1800-2100
- Potential woodland upper limit (m): 2150

Water discharges (m^3s^{-1})

<i>Maximum</i>	12.7
<i>Mean</i>	0.02
<i>Minimum</i>	0.008

Debris flow events

Date	Magnitude (m^3)
12 Aug. 1958	?
15 July 1988	7200

Summer 1994	1300
<i>Notes</i>	

The 1958 event, triggered by intense rainfall, caused three victims.
In the 1988 the debris flow stopped upstream of the retention check-dam.

Proceedings of the workshop on "Upland hydraulics", Bressanone, 8-13/10/84
FI n.89059 and 95027

Stream: Rio Gadria

General features

<i>Administrative code</i>	Nr.	1821
<i>Municipality</i>		Silandro – Lasa
<i>Stream name</i>		Gadria or Allitz / Gadriabach or Allitzerbach
<i>Survey map</i>	1:10000	012 09 and 012 13
<i>Topographic Coordinates</i>	(outlet section)	E 1631502 N 5165620
<i>CARFRA Code</i>	Nr.	-
<i>Collection drain</i>	Nr., name	1, Adige
<i>Next collection drain</i>	Nr., name	-

Morphometric characteristics

	<i>Basin area</i>	(km ²)	15.75
<i>Basin Altitude</i>	- maximum	(m)	3175
	- mean	(m)	2251
	- minimum (fan top)	(m)	1100
	- confluence	(m)	840
<i>Basin Slope</i>	- maximum	(°)	65.08
	- mean	(°)	31.14
	- minimum	(°)	0.51
<i>Average aspect</i>		(°)	177.11
<i>Channel lenght</i>		(km)	8.32
<i>Channel mean slope</i>		(°)	12.73
<i>Fan mean slope</i>		(°)	6.86

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Micaschists, moraine and talus debris
<i>Medium reach</i>	Micaschists, paragneiss, talus slopes, milonites

<i>Lower reach</i>	Alluvial fans
<i>notes</i>	The catchment is steep and unstable in its medium-upper part

Land use (%)

<i>Crops</i>	2.50
<i>Woodlands</i>	10.10
<i>Grasslands</i>	35.17
<i>Heath and shrub lands</i>	-
<i>Scattered vegetation cover</i>	31.40
<i>Bare rocks</i>	20.83
<i>Other</i>	-

- Actual woodland upper limit (m) : 1900-2100
- Potential woodland upper limit (m): 2200

Water discharges (m^3s^{-1})

<i>Maximum</i>	100
<i>Mean</i>	0.17
<i>Minimum</i>	0.07

Debris flow events

Date	Magnitude (m^3)
25-26 July 1992	31000
<i>Notes</i>	

Alto Adige 27/7/92
FI n. 92154

Stream: Rio Graves

General features

<i>Administrative code</i>	Nr.	1515
<i>Municipality</i>		S. Leonardo in Passiria
<i>Stream name</i>		Graves / Grafelsbach
<i>Survey map</i>	1:10000	013 03
<i>Topographic Coordinates</i>	(outlet section)	E 1.669.783
		N 5.181.791
<i>CARFRA Code</i>	Nr.	1791
<i>Collection drain</i>	Nr., name	1469, Passirio
<i>Next collection drain</i>	Nr., name	1, Adige

Morphometric characteristics

	<i>Basin area</i>	(km ²)	8.05
<i>Basin Altitude</i>	- maximum	(m)	2768
	- mean	(m)	1791
	- minimum (fan top)	(m)	620
	- confluence	(m)	540
<i>Basin Slope</i>	- maximum	(°)	68.45
	- mean	(°)	32.01
	- minimum	(°)	0.51
	Average aspect	(°)	225.64
	Channel lenght	(km)	6.29
	Channel mean slope	(°)	16.40
	Fan mean slope	(°)	11.53

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Paragneiss, micascists, moraine and slope debris
<i>Medium reach</i>	Paragneiss, micascists, gneiss
<i>Lower reach</i>	alluvial fans
<i>notes</i>	Erosion areas in the upper part of the basin for local moraine deposits on the hillslopes

Land use (%)

<i>Crops</i>	0.24
<i>Woodlands</i>	56.69
<i>Grasslands</i>	22.80
<i>Heath and shrub lands</i>	-

<i>Scattered vegetation cover</i>	8.57
<i>Bare rocks</i>	11.70
<i>Other</i>	-

- Actual woodland upper limit (m) : 1950-2050
- Potential woodland upper limit (m): 2100

Water discharges (m^3s^{-1})

<i>Maximum</i>	45.8
<i>Mean</i>	0.11
<i>Minimum</i>	0.044

Debris flow events

Date	Magnitude (m^3)
3 july 1940	10.000
<i>Notes</i>	
A landslide triggered the event by obstructing the stream; downstream 2 houses were destroyed with 8 victims.	

Stream: Rio Lana

General features

<i>Administrative code</i>	Nr.	1724
<i>Municipality</i>		Naturno
<i>Stream name</i>		Lana / Lahnbach
<i>Survey map</i>	1:10000	013 09
<i>Topographic Coordinates</i>	(outlet section)	E 1654478
		N 5169170
<i>CARFRA Code</i>	Nr.	1657
<i>Collection drain</i>	Nr., name	1, Adige
<i>Next collection drain</i>	Nr., name	-

Morphometric characteristics

	<i>Basin area</i>	(km ²)	4.86
<i>Basin Altitude</i>	- maximum	(m)	3065
	- mean	(m)	1892
	- minimum (<i>fan top</i>)	(m)	630
	- confluence	(m)	520
<i>Basin Slope</i>	- maximum	(°)	68.22
	- mean	(°)	39.78
	- minimum	(°)	0.00
	<i>Average aspect</i>	(°)	162.93
	<i>Channel lenght</i>	(km)	4.83
	<i>Channel mean slope</i>	(°)	25.47
	<i>Fan mean slope</i>	(°)	7.36

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Micaschists, paragneiss and granitic gneiss
<i>Medium reach</i>	Micaschists, paragneiss, ortogneiss and moraine
<i>Lower reach</i>	Alluvium and alluvial fans
<i>notes</i>	Very unstable catchment and steep torrent; moraine and talus at the slopes toes

Land use (%)

<i>Crops</i>	8.09
<i>Woodlands</i>	-
<i>Grasslands</i>	21.96
<i>Heath and shrub lands</i>	-
<i>Scattered vegetation cover</i>	58.69
<i>Bare rocks</i>	7.36
<i>Other</i>	3.91

- Actual woodland upper limit (m) : 1800-2100
- Potential woodland upper limit (m): 2150

Water discharges (m³s⁻¹)

<i>Maximum</i>	26.9
<i>Mean</i>	0.043

<i>Minimum</i>	0.017
----------------	-------

Debris flow events

Date	Magnitude (m ³)
7 Aug. 1995	10000

Notes
Caused by a big storm, the debris flow obstructed the underpass of the National Road n.38 and flooded the carriageway. The day after the phenomenon occurs again but in a lighter magnitude.

FI n. 95116
Alto Adige 8/8/95

Stream: Rio Lega

General features

<i>Administrative code</i>	Nr.	1526
<i>Municipality</i>		S. Leonardo in Passiria
<i>Stream name</i>		Lega or Clava / Kellitz or Kehltalbach
<i>Survey map</i>	1:10000	013 03 and 013 04
<i>Topographic Coordinates</i>	(outlet section)	E 1671407 N 5184904
<i>CARFRA Code</i>	Nr.	1794
<i>Collection drain</i>	Nr., name	1496, Passirio
<i>Next collection drain</i>	Nr., name	1, Adige

Morphometric characteristics

<i>Basin area</i>	(km ²)	1.86	
<i>Basin Altitude</i>	- maximum	(m)	2318
	- mean	(m)	1548
	- minimum (fan top)	(m)	830
	- confluence	(m)	615
<i>Basin Slope</i>	- maximum	(°)	67.46
	- mean	(°)	36.26
	- minimum	(°)	3.25
<i>Average aspect</i>	(°)	274.55	
<i>Channel lenght</i>	(km)	2.25	

<i>Channel mean slope</i>	(°)	32.85
<i>Fan mean slope</i>	(°)	14.28

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Paragneiss, micaschists and gneiss
<i>Medium reach</i>	Paragneiss, micaschists and gneiss
<i>Lower reach</i>	Alluvial fans
<i>notes</i>	Extremely steep catchment; moraine deposits on the slopes; Bank erosion phenomena along the channel

Land use (%)

<i>Crops</i>	-
<i>Woodlands</i>	56.23
<i>Grasslands</i>	-
<i>Heath and shrub lands</i>	-
<i>Scattered vegetation cover</i>	43.77

Debris flow events

Date	Magnitude (m^3)
6 July 1994	10000

Notes
The event started around 6 pm after an intense hail storm initiated around 5 pm.

Stream: Rio Masul

General features

<i>Administrative code</i>	Nr.	1492
<i>Municipality</i>		Scena
<i>Stream name</i>		Masul / Masulbach
<i>Survey map</i>	1:10000	013 07
<i>Topographic Coordinates</i>	(outlet section)	E 1668116
		N 5176482
<i>CARFRA Code</i>	Nr.	1435
<i>Collection drain</i>	Nr., name	1469, Passirio
<i>Next collection drain</i>	Nr., name	1, Adige

Morphometric characteristics

	<i>Basin area</i>	(km ²)	15.90
<i>Basin Altitude</i>	- maximum	(m)	2676
	- mean	(m)	1700
	- minimum (fan top)	(m)	490
	- confluence	(m)	440
<i>Basin Slope</i>	- maximum	(°)	68.80
	- mean	(°)	34.30
	- minimum	(°)	0.51
	<i>Average aspect</i>	(°)	221.63
	<i>Channel lenght</i>	(km)	7.78
	<i>Channel mean slope</i>	(°)	13.73
	<i>Fan mean slope</i>	(°)	5.73

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Granite, limestones, paragneiss and micaschists
<i>Medium reach</i>	Paragneiss, micaschists and moraine
<i>Lower reach</i>	Recent alluvium and alluvial fans
<i>notes</i>	Highly unstable catchment, with large landslides, in the upper part; Talus and moraine with variable thickness are the covering deposits.

Stream: Rio Bianco

General features

<i>Administrative code</i>	Nr.	951
<i>Municipality</i>		Fortezza
<i>Stream name</i>		Bianco / Weissenbach
<i>Survey map</i>	1:10000	007 16
<i>Topographic Coordinates</i>	(outlet section)	E 1697426
		N 5186589
<i>CARFRA Code</i>	Nr.	1217
<i>Collection drain</i>	Nr., name	25, Isarco
<i>Next collection drain</i>	Nr., name	1, Adige

Morphometric characteristics

	<i>Basin area</i>	(km ²)	6.44
<i>Basin Altitude</i>	- maximum	(m)	2113
	- mean	(m)	1640
	- minimum (fan top)	(m)	800
	- confluence	(m)	773
<i>Basin Slope</i>	- maximum	(°)	71.84
	- mean	(°)	33.64
	- minimum	(°)	0.00
	<i>Average aspect</i>	(°)	185.97
	<i>Channel lenght</i>	(km)	3.84
	<i>Channel mean slope</i>	(°)	16.40
	<i>Fan mean slope</i>	(°)	7.80

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Granite
<i>Medium reach</i>	Granite
<i>Lower reach</i>	Talus slopes and alluvial fan
<i>notes</i>	Straight long valley on a tectonic line; it receives debris from degrading lateral valleys; on its left side (less steep) sediments accumulate and then are transported downstream by debris flow

Land use (%)

<i>Crops</i>	-
<i>Woodlands</i>	64.36
<i>Grasslands</i>	14.31
<i>Heath and shrub lands</i>	1.45

<i>Scattered vegetation cover</i>	19.83
<i>Bare rocks</i>	-
<i>Other</i>	0.05

- Actual woodland upper limit (m) : 2000
- Potential woodland upper limit (m): 2000

Water discharges (m^3s^{-1})

<i>Maximum</i>	29.30
<i>Mean</i>	0.16
<i>Minimum</i>	0.051

Debris flow events

Date	Magnitude (m^3)
14 Aug. 1998	3000
6 Aug. 1985	7000

Notes
The 1985 event consisted of large boulder and logs in a sandy matrix; it flooded the central part of the alluvial fan, eroded the stream bed, blocked the road bridge and invaded the carriageway.

Summer 1990	3000
July 1945	?
25 July 1937	?
1934	?
1882	?

Notes

27 july 1995: a hailstorm bursted about 7 pm around Piz de Peres and Monte Parcaccia, at 8 pm the debris flow fell down (it lasted for about half an hour) and obstructed the Rio di S.Vigilio channel. The "Ciamur" area was flooded with mud and stones.

1945: the channel bed was elevated by 1 m for the debris and brushwood aggradation.

Water discharges ($\text{m}^3 \text{s}^{-1}$)

<i>Maximum</i>	13.50
<i>Mean</i>	0.052
<i>Minimum</i>	0.018

Debris flow events

Date	Magnitude (m^3)
1-2 June 1962	4000

Notes
A 80m-long (2000 m^2) wooded slope slid for about 40 m into a right-side tributary, along which the sediments reached the main channel and then the valley bottom, at "Colle di Dentro".
Several check-dams have been subsequently built along the channel, for the large number of erosion areas and shallow landslides on the left-side slope.

Stream: Rio Petzl

General features

<i>Administrative code</i>	Nr.	594
<i>Municipality</i>		Rasun / Anterselva
<i>Stream name</i>		Petzl / Pötzelsbach

Stream: Rio Rosso

General features

<i>Administrative code</i>	Nr.	774
<i>Municipality</i>		Valle Aurina
<i>Stream name</i>		Rosso / Rotbach
<i>Survey map</i>	1:10000	002 15, 008 03 and 008 04
<i>Topographic Coordinates</i>	(outlet section)	E 1722495 N 5205998
<i>CARFRA Code</i>	Nr.	1246
<i>Collection drain</i>	Nr., name	630, Aurino
<i>Next collection drain</i>	Nr., name	248, Rienza

Morphometric characteristics

	<i>Basin area</i>	(km ²)	7.02
<i>Basin Altitude</i>	- maximum	(m)	3318
	- mean	(m)	2107
	- minimum (fan top)	(m)	1040
	- confluence	(m)	995
<i>Basin Slope</i>	- maximum	(°)	64.45
	- mean	(°)	33.90
	- minimum	(°)	0.50
	<i>Average aspect</i>	(°)	128.32
	<i>Channel lenght</i>	(km)	5.12
	<i>Channel mean slope</i>	(°)	16.50
	<i>Fan mean slope</i>	(°)	5.77

Geologic and geomorphologic characteristics

<i>Upper reach</i>	Granitic and aplitic gneiss, moraine
<i>Medium reach</i>	Granitic and aplitic gneiss, moraine
<i>Lower reach</i>	Granitic and aplitic gneiss, moraine
<i>notes</i>	Moraine deposits with debris at the confluence, talus at the slope toes; Downstream the small glaciers a wide degrading area is present and its sediments tend to accumulate between 1900 and 1600 m a.s.l.. From this point the debris moves down during very intense rainfalls.

Land use (%)

<i>Crops</i>	5.08
<i>Woodlands</i>	10.50
<i>Grasslands</i>	4.19
<i>Heath and shrub lands</i>	-
<i>Scattered vegetation cover</i>	42.73
<i>Bare rocks</i>	32.05
<i>Other</i>	5.46

- Actual woodland upper limit (m) : 1700-1900

- Potential woodland upper limit (m): 2100

Water discharges (m^3s^{-1})

<i>Maximum</i>	19.50
<i>Mean</i>	0.120
<i>Minimum</i>	0.043

Debris flow events

Date	Magnitude (m^3)
6 Aug. 1985	3500
29 June 1959	?
Autumn 1928	?
17 Aug. 1878	?
<i>Notes</i>	
6/8/1985: Slope failures in the upper part, deposition in the lower reach at the retention check-dams.	
17/8/1878: After intense rainfall and sudden snow melting the debris flow obstructed the Aurino channel, flooding the town of S.Martino.	
29/6/1959: Rio Rosso with the other neighbouring torrents forced the Aurino stream to move its channel to the left side.	

Mortara, Sorzana and Villi (1986) L'evento alluvionale del 6 agosto 1985 nella vallata del fiume Isarco..., Memorie di Scienze Geologiche, Vol.XXXVIII, Padova, dicembre, 427,457;

Stream: Rio di Troghe

General features

<i>Administrative code</i>	Nr.	485
<i>Municipality</i>		Dobbiaco
<i>Stream name</i>		Troghe / Trogerbach
<i>Survey map</i>	1:10000	016 07
<i>Topographic Coordinates</i>	(outlet section)	E 1745643
		N 5177933
<i>CARFRA Code</i>	Nr.	1035
<i>Collection drain</i>	Nr., name	248, Rienza
<i>Next collection drain</i>	Nr., name	25, Isarco

Morphometric characteristics

	<i>Basin area</i>	(km ²)	1.18
<i>Basin Altitude</i>	- maximum	(m)	2378
	- mean	(m)	1715
	- minimum (fan top)	(m)	1350
	- confluence	(m)	1254
<i>Basin Slope</i>	- maximum	(°)	70.11
	- mean	(°)	31.59
	- minimum	(°)	0.50
	Average aspect	(°)	120.81
	Channel lenght	(km)	2.32
	Channel mean slope	(°)	23.24
	Fan mean slope	(°)	6.03

Geologic and geomorphologic characteristics

<i>Upper reach</i>	“Mendola dolomite”, “Werfen” formation
<i>Medium reach</i>	“Werfen” formation (clayey sandstone)
<i>Lower reach</i>	Alluvial fan
<i>notes</i>	Debris is produced by intense rock degradation in the upper part, it accumulates at the cliffs' toes, moving downstream during intense rainfall events; the alluvial fan originated the Dobbiaco Lake.

Land use (%)

<i>Crops</i>	-

<i>Mean</i>	0.257
<i>Minimum</i>	0.086

Debris flow events

Date	Magnitude (m^3)
24 March 1951	1000000

Notes

A large landslide moved from the Piz Cudcena into the channel where it was fluidified.
During the first days it moved at about 60 meters/hour, then it stopped for the temperature drop.
In the first days of April the debris moved again for the temperature rise and reached the Rio Gardena.

Alto Adige 25/3/51
